Fixing valves reliably in end position

During shutdowns and maintenance work it is often necessary that valves are securely fixed in an end position. This is often particularly important for heavy or vertically running valves.

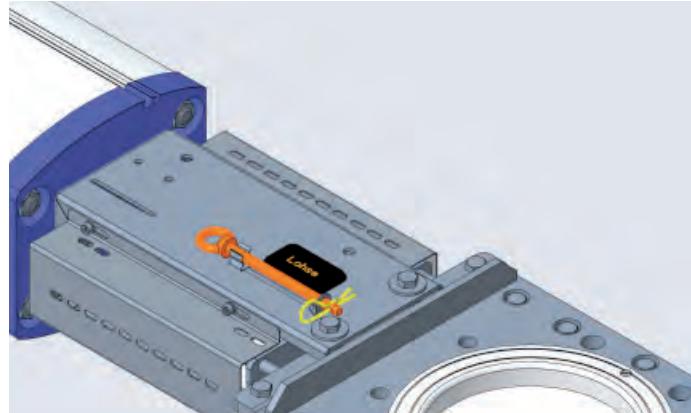

With LOHSE locking devices, a form-fit connection enables a safe positioning of the valves and ensures a reliable locking. Unwanted movements of the valve are thus prevented, unintentional or automatic movement is no longer possible in a secured state.

The valve can be locked in both the OPEN and CLOSE position. The locking pin can be secured during shutdown or maintenance work with the safety cotter pin supplied or, if required, with a padlock (not supplied). If a padlock is used, the locking pin cannot be removed without authorization.

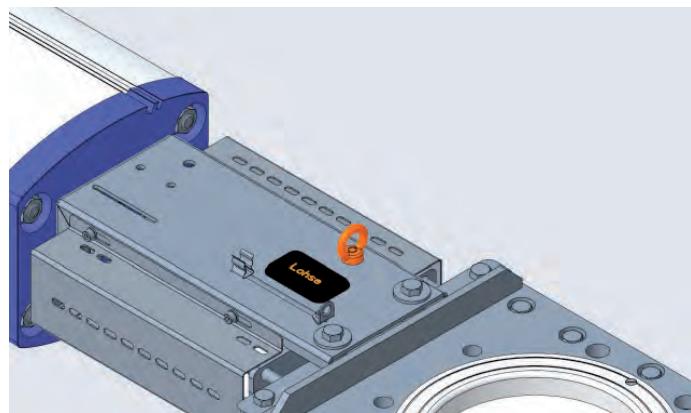

The locking pin is installed directly at the valve and is therefore always ready to hand. No special tools are required.
